The following is an Examiner's Statement of Reasons for Allowance: The Prior Art of Record, which includes Munz et al. (6,111,380) teach that it is known to detect a stopped or blocked stepper motor by monitoring an un-energized winding, while energizing one other winding. Comparisons are made to thresholds in order to determine a hard jam and an elastic jam. However, the teaching is with respect to a system other than a three-phase system and the phases are not "star" or "Y" connected. It is the opinion of the Examiner that the Prior Art of Record does not disclose nor make obvious the claimed combinations found within Independent Claims 1 and 10, which require a method or device for detecting the blocking of "a three-phase stepper motor" connected in "star mode" by energizing or supplying "two coils of the motor in such a way that they are traversed by a current while the third coil is coupled to a measurement input".

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The Prior Art made of record and not relied upon is considered pertinent to Applicant's disclosure. Munz et al. (6,111,380), Schlager et al. (5,514,939), Shao et al. (6,633,145) and Matsushiro et al. (6,512,341).
